

Fred Pinczuk is an accomplished professional in the single-serve plastic industry with over 35 years of experience. He has developed a specialized background in light-weight and hot-fill packaging solutions and systems integrations, making him a go-to expert for all major forms of manufacturing processes to create the perfect finished product.

For the last 3 years, Fred has concentrated his efforts on transitioning existing Petro-chemical plastic solutions to using biopolymers suited for multiple end-of-life options that cause no harm to the environment. His efforts have led him to establish Beyond Plastic LLC full material science and R&D lab for the industrial application and compliance of bioplastics such as PHA's and others.

With extensive travels throughout Western Europe and the Middle East, Fred brings a global perspective to the industry. As a bottling and packaging industry expert, he focuses keenly on the entire production process, from raw material sourcing to finished product distribution.

Fred's journey started in the late 90s when he worked on the early adoption of RPET multilayer solutions for the Australian market. He then worked on packaging solutions for the airline industry following the total ban on glass products post 9/11.

Fred's track record of success includes serving as Plant Manager for POM Wonderful Inc and as Director of Operators and COO for several start-up brands, including Neuro Brand LLC and Core Hydration LLC. He has worked for the four largest co-packing equipment suppliers, including TechLong USA, Husky (N.A. & EU), Sidel S.A., and SIG.

In addition to his expertise in manufacturing processes, Fred's knowledge extends to material science and material sensitivity, particularly in wines and fruit juices. His vast experience and wealth of knowledge in the industry make him an asset to any organization.
